TECHNICAL SKILLS

- Proficient with Typescript, Javascript, Node.js, React.js, Serverless, observability, microservices, test-driven dev
- Adept with AI-assisted and agentic development, AWS, A/B testing, and experimentation

WORK EXPERIENCE

Auto Club Enterprises — Los Angeles, CA

Senior Lead Software Engineer — *2025 – Present*

- Leading and growing two product teams ($25M+, 20+ people), coaching engineering leaders and ICs at multiple levels and creating growth opportunities through delegation and ownership
- Assisting with organizational shift toward AI-assisted development, transforming workflows to accelerate delivery
- Owning the adoption and rollout of DX to measure developer effectiveness, driving data-informed decisions on engineering productivity/satisfaction/experience and investments

Lead Software Engineer — *2021 – 2025*

- Spearheaded the formation and growth of our Travel team and drove the vision and execution of the team's first application: a customer-facing online appointment scheduling system for Travel Agents, improving funnel conversion over the legacy application by **13%** *(React.js, Node.js, AWS, Salesforce*)
- Championed the vetting, testing, proof of concept, and department rollout of a feature management SaaS
- Volunteered as a mentor for a technical talent acceleration program, offering frequent 1:1s and career pathing discussions for high-potential IC's

Senior Software Engineer — *2020 – 2021*

- Headed development of marketing data integration API to allow a data pre-fill experience for our users on our auto insurance quote web application, improving funnel conversion by **25%** *(React.js, Node.js, Redux, AWS Lambda, API Gateway)*
- Participated as a mentor for the organization's Cloud Enablement Program, helping several engineers understand and prepare for cloud development and migration

Software Engineer — *2018 – 2020*

- Rewrote the organization's top priority product: a web application to allow our customers to buy insurance online without speaking to an agent, leading to a **75%** funnel conversion increase for mobile, 65% for desktop *(React.js, Redux, Node.js, AWS Lambda, AWS API Gateway, AWS DynamoDB)*

Kaiser Permanente — Pasadena, CA

Staff Software Engineer (Staff IT Engineer Applications) — *2017 – 2018*
Software Engineer (IT Engineer Applications) — *2015 – 2017*

- Developed a medical record system for patients that assisted nurses with keeping track of patients' surgical procedures *(Angular.js, Node.js, IBM Bluemix, Jenkins, and ElasticSearch)*
- Identified bottlenecks and reduced load times by **80%** for an internal research fitness dashboard and created data export tools to allows researchers to make quantitative analysis *(Node.js, jQuery)*

EDUCATION

Master of Science, Computer Engineering
University of California – Irvine
